Each unit of arrester assembly shall be hermetically sealed, leak tested and protected against ingress of moisture and shall be individual demountable. The seal shall be properly designed and tested for operation under extreme weather conditions.

### Assembly:

- Lightning arrester shall be supplied along with the insulating base, terminal connector and necessary hardwares. The Assembly consists of a stack of Metal Oxide elements arranged in a CAGE TYPE design. All metal parts shall be of non-rusting and non-corroding metal. Bolts, screws and pins shall be provided with lock

washers. Lightning arrester construction shall be suitable to withstand Seismic Loading, Short Circuit Forces and wind load and the force exerted on the arrester base and to the terminal imposed by the line conductor. All similar parts, particularly removable ones, shall be interchangeable.

- Housing shall be polymeric to provide thermal dissipation of heat generated in the metal oxide elements during overvoltage and line discharge. Polymeric housing shall be free from flaws affecting the mechanical and electrical strength of the arrester. Housing shall be capable to withstand the desired pollution stresses without flashover. Arrester shall be capable to withstand the temperature rise due to the non-uniform field distribution, caused by the pollution on the surface of the housing.
- The arrester shall have thermal stability to withstand the heat generated from the ZnO element due to continuous operating voltage and surges. It shall be less than the thermal power dissipation of the housing, the element shall remain in an undamaged condition, capable protective function.
- Arresters shall incorporate anti-contamination feature to prevent arrester failure, consequent to uneven voltage gradient across the stack in the event of contamination of the arrester insulating material. These features shall be described in detail when submitting the Bid. Arresters shall be capable of discharging over-voltages occurring during switching of unloaded transformers, capacitor banks and long lines. No radio interferences shall be caused by the arresters operating at the normal rated voltage.
- MO resistor diameter shall be near to 100mm and bidder shall mention energy handling capability.

#### **SURGE COUNTER:**

- Cyclometric 5 digit, non-resetting type counter, dial type surge counter shall be provided for each lightning arrester for automatically recording the number of discharges. Each counter shall have a continuous leakage current indicator and shall not require an external power source of operation. The value of leakage current beyond which the operation is abnormal shall be clearly marked in red colour on the detector.
- Surge arrester shall include a milli-ammeter to monitor the leakage current. The milli-ammeter usually bare a red mark at the higher scale regions. Increase of leakage current to the red marked zone is essentially an indication that the arrester is likely to attain the thermal runaway condition. The qualitative information regarding the arrester health, obtained from the milli-ammeter, helps the user to take preventive measures before the arrester failure.
- Discharge counters and milli-ammeters shall be suitable for mounting on structure and shall be mounted at approximately 1.5 meters above ground level. The reading of the milli-ammeter and counters shall be visible through an inspection glass panel. The terminals shall be of robust and adequate size and shall be so located that incoming and outgoing connections are made with minimum possible bends.
- The connecting conductor from lightning arrester earth terminal to the discharge counter incoming terminal shall be insulated for a minimum of 4 kV and this insulated conductor shall be supplied along with the arrester by the bidder. The surge arrester to surge counter connection shall be done by means insulated multi strand copper cable of minimum size 35 sq.mm to withstand the fault currents during severe operating conditions.
- The surge arrester shall be designed to operate/ withstand without damage or change in performance for the high current impulse, long duration current impulse corresponding to the discharge class of the surge arrester and nominal discharged current corresponding to the discharge current of the surge with which it is used.
- The external and internal parts of the surge monitor shall be hermetically sealed to withstand the atmospheric variation of temperature and humidity, rain and dust encountered in station in which they are installed. The surge Monitor line terminal shall be solidly connected to the ground terminal of the surge monitor through an inbuilt metal oxide element satisfying the operational requirement.

#### **EARTHING PADS:**

Suitable earthing pads shall be provided in the lightning arrester and surge counter for earthing.
